System supplier declaration. - I certify on behalf of the company named above as a supplier of a **Generating Unit**, that all products supplied by the company with the above Type Test reference number will be manufactured and tested to ensure that they perform as stated in this document, prior to shipment to site and that no site modifications are required to ensure that the product meets all the requirements of G83/2.

| Signed | James Wang | On behalf of | Shenzhen Growatt New Energy Technology Co., Ltd. |
|--------|------------|--------------|---|
|--------|------------|--------------|---|

Note that testing can be done by the manufacturer of an individual component, by an external test house, or by the supplier of the complete system, or any combination of them as appropriate.

Where parts of the testing are carried out by persons or organisations other than the supplier then the supplier shall keep copies of all test records and results supplied to them to verify that the testing has been carried out by people with sufficient technical competency to carry out the tests.

The family product model is made by the following products:

Growatt 3200-S

Growatt 3700-S

I tqy cw'4222/U

I tqy cw4722/U"

I tqy cw'5222/U'

The model Growatt 3000-S is as the representative test models in this report.

Power Quality. Harmonics.

These tests should be carried out as specified in 61000-3-12 or 61000-3-2. Only one set of tests is required and the **Manufacturer** should decide which one to use and complete the relevant table. The chosen test should be undertaken with a fixed source of energy at two power levels a) between 45 and 55% and b) at 100% of maximum export capacity. The test should be carried out on a single **Generating Unit**. The results need to comply with the limits of table 2 of BS EN 61000-3-12 for single phase equipment, to table 3 of BS EN 61000-3-12 for three phase equipment or to table 1 of BS EN 61000-3-2 if that standard is used.

Note that Generating Units meeting the requirements of BS EN 61000-3-2 will need no further assessment with regards to harmonics. Generating Units with emissions close to the limits laid down in BS EN 61000-3-12 may require the installation of a transformer between 2 and 4 times the rating of the **Generating Unit** in order to accept the connection to a **DNO**'s network.

| Generating Unit tested to BS EN 61000-3-2 | | | | | | | | | |
|---|-----------------------------|----------------------|----------|----------------------|--|--|--|--|--|
| Generator | Unit rating per phase (rpp) | 3.0 kW | | | | | | | |

|----|-------|-------|-------|

Note the higher limits for odd harmonics 21 and above are only allowable under certain conditions, if these higher limits are utilised please state the exemption used as detailed in part 6.2.3.4 of BS EN 61000-3-2 in the box below.

Power Quality. Voltage fluctuations and Flicker.

The tests should be carried out on a single **Generating Unit.** Results should be normalised to a s tandard s ource impedance or if t his results in figures above the limits set in B S E N 61000-3-11 to a suitable Maximum Impedance.

| | Starting | | | | Stopping | | | Running | | |
|--|----------|------|------|---|----------|------|------|---------|--------------|--|
| | d max | dc | d(t) | | d max | dc | d(t) | P st | P It 2 hours | |
| Measured Values at test impedance | | | | | | | | | | |
| Normalised to standard impedance | 1.08 | 0 | 0 | | 1.08 | 0 | 0 | 0.21 | 0.15 | |
| Normalised to required maximum impedance | | | | | | | | | | |
| Limits set under BS EN 61000-3-11 | 4% | 3.3% | 3.3% | 6 | 4% | 3.3% | 3.3% | 1.0 | 0.65 | |
| | | | | | | | | | | |
| Test Impedance | R | | | | Ω | XI | | | Ω | |
| Standard Impedance | R | 0.2 | 24 | | Ω | XI | 0.15 | | Ω | |
| Maximum Impedance | R | | | | Ω | ΧI | | | Ω | |

^{*} Applies to three phase and split single phase **Generating Units**

For voltage change and flicker measurements the following formula is to be used to convert the measured values to the normalised values where the power factor of the generation output is 0.98 or above.

Normalised value = Measured value*reference source resistance/measured source resistance at test point

Single phase units reference source resistance is 0.4 Ω

Two phase units in a three phase system reference source resistance is 0.4 Ω

Two phase units in a split phase system $\,$ reference source resistance is 0.24 Ω

Three phase units reference source resistance is 0.24 Ω

Where the power factor of the output is under 0.98 then the XI to R ratio of the test impedance should be close to that of the Standard Impedance.

The stopping test should be a trip from full load operation.

The duration of these tests need to comply with the particular requirements set out in the testing notes for the technology under test. Dates and location of the test need to be noted below

| Test location GROWATT NEWENERGY TECHNOLOGY CO., LTD | Test start date | 2017-6-13 | Test end date | 2017-6-15 | |
|---|-----------------|------------|----------------|---------------|--|
| | Test location | GROWATT NE | WENERGY TECHNO | LOGY CO., LTD | |

Power quality. DC injection.

The tests should be carried out on a single **Generating Unit** Tests are to be carried out three power defined levels ±5%. At 230V a 2kW single phase inverter has a current output of 8.7A so DC limit is 21.75mA, a 10kW three phase inverter has a current output of 43.5A at 230V so DC limit is 108.75mA

[^] Applies to single phase **Generating Units** and **Generating Units** using two phases on a three phase system

| Test power level | 10% | 55% | 100% | |
|--------------------------------|--------|--------|--------|--|
| Recorded value in Amps | 25.5mA | 23.2mA | 23.7mA | |
| as % of rated AC current | 0.13% | 0.12% | 0.12% | |
| Limit | 0.25% | 0.25% | 0.25% | |

| Protection. Frequency tests | | | | | | | | | | | |
|-----------------------------|-----------|---------------|-----------|---------------|--------------------|-----------------|--|--|--|--|--|
| Function | Settir | ng | Trip t | est | "No-trip tests" | | | | | | |
| | Frequency | Time delay | Frequency | Time delay | Frequency /time | Confirm no trip | | | | | |
| O/F stage 1 | 51.5Hz | 90s | 51.49Hz | 90.05S | 51.3Hz 95s | No trip | | | | | |
| O/F stage 2 | 52Hz | 0.5s | 51.99Hz | 0.54S | 51.8Hz 89.98s | No trip | | | | | |
| | | | | | 52.2Hz 0.48s | No trip | | | | | |
| U/F stage 1 | 47.5Hz | 20s | 47.51Hz | 20.028 | 47.7Hz 25s | No trip | | | | | |
| U/F stage 2 | 47Hz | 0.5s | 47.02Hz | 0.54S | 47.2Hz 19.98s | No trip | | | | | |
| | | | | | 46.8 Hz 0.48s | No trip | | | | | |

Note. F or frequency Trip tests the Frequency required to trip is the setting \pm 0.1Hz. I n order to m easure the time delay a larger deviation than the minimum required to operate the projection can be used. The "No-trip tests" need to be carried out at the setting \pm 0.2Hz and for the relevant times as shown in the table above to ensure that the protection will not trip in error.

| Protection. Voltage tests | | | | | | | | | | | |
|---------------------------|-------------------------|------|--------------|---------------|--|-----------------|--|--|--|--|--|
| Function | Setti | ng | Trip t | est | "No trip-tests" All phases at same voltage | | | | | | |
| | Voltage Time delay | | Voltage | Time delay | Voltage /time | Confirm no trip | | | | | |
| O/V stage 1 | 262.2V | 1.0s | 262.5V | 1.04S | 258.2V 2.0 sec | No trip | | | | | |
| O/V stage 2 | O/V stage 2 273.7V 0.5s | | 272.9V 0.55S | | 269.7V 0.98s | No trip | | | | | |
| | | | | | 277.7V 0.48s | No trip | | | | | |
| U/V stage 1 | | | 199.6V | 2.51S | 204.1V 3.5s | No trip | | | | | |
| U/V stage 2 | | | 183.8V 0.54S | | 188V 2.48s | No trip | | | | | |
| | | | | | 180v 0.48 sec | No trip | | | | | |

Note. For voltage tests the voltage required to trip is the setting plus or minus 3.45V. The time delay can be measured at a larger deviation than the minimum required to operate the projection. The No-trip tests need to be carried out at the setting ±4V and for the relevant times as shown in the table above to ensure that the protection will not trip in error.

a) Protection. Loss of Mains test and single phase test.

The tests are to be To be carried out at three output power levels plus or minus 5%, an alternative for inverter connected Generating Units can be used instead.

To be c arried out at three output power levels plus or minus 5%, an al ternative for inverter connected Generating Units can be used instead.

| Test Power | 10% | 55% | 100% | 10% | 55% | 100% |

| | Trip time. Limit is 0.5s | 0.311S | 0.325S | 0.356S | 0.332S | 0.345S | 0.347S |

Single phase test for multi phase **Generating Units**. Confirm that when generating in parallel with a network operating at around 50Hz with no network disturbance, that the removal of a single phase connection to the **Generating Unit**, with the remaining phases connected causes a disconnection of the generating unit within a maximum of 1s.

| Ph1 | Confirm Trip | Ph2 | Confirm Trip | Ph3 | Confirm Trip |
|---------|--------------|---------|--------------|---------|--------------|
| removed | - | removed | | removed | - |

| b) Protection. Frequency change, Stability test | | | | | | |
|---|--------------------|-------------------------|--------|-----------------|--|--|
| | Start Frequency | Change End Frequency | | Confirm no trip | | |
| Positive Vector Shift | 49.5Hz | +9 degrees | | No trip | | |
| Negative Vector Shift | 50.5Hz | - 9 degrees | | No trip | | |
| Positive Frequency drift | 49.5Hz | +0.19Hzs ⁻¹ | 51.5Hz | No trip | | |
| Negative Frequency drift | 50.5Hz | -0.19Hzs ⁻¹ | 47.5Hz | No trip | | |

c) Protection. Re-connection timer.

The tests should prove that the reconnection sequence starts in no less than 20s for restoration of voltage and frequency to within the stage 1 settings of table 10.5.7.1

| Test should prove that the reconnection sequence starts in no less than 20s for restoration of | | | | | | |
|--|----------------|--|---|-----------------|-----------------|--|
