## E350 series 2

Technical Data

Building on its tradition of open communication meters, Landis+Gyr is now bringing out the E350, the latest generation of its flexible modular meters. E350 is compatible with the interfaces and communication modules of the existing ZMF/ZFF100 platform.

| f | 20.12 .2011 | Maximum cross-section of the conductor is terminal-dependent. <br> Document template updated. <br> g |
|  | 12.12 .2012 | Company name changed to Landis+Gyr AG. <br> Auxiliary circuits deleted. <br> Suspension hanger added. |

[^0]The E350 direct-connected residential meters record active and reactive energy consumption in all three-phase, four-wire networks (ZMF100) and three-phase, three-wire networks (ZFF100).

## Basic Version

The basic version provides energy registers for tariffication, red test diodes for active and reactive energy, an optical interface for meter reading and an interface for various communication forms. This interface is protected against fraud and is independent of the module suppliers. The exchangeable AMR Module is situated outside of the calibration liability.

## Disconnector

The function of the disconnector is customerspecific and is defined by the communication module. Possible uses: anti-tampering, load limitation, remote disconnect, prepayment.

## Extensions

The basic version can be extended with various AMR Modules for additional functions and communications: multi-rate import/export with external rate control, S0 pulse output, communication via PLC, GSM/GPRS or Ethernet.

The values below are for the basic $3 x 230 / 400 \mathrm{~V}$ version.

## E350 series 2 ZxF100Ax/Cx - Technical specifications

## General

## Voltage

| Nominal voltage $U_{n}$ | $3 \times 230 / 400 \mathrm{~V}$ |
| :--- | ---: |
| ZMF100 | $3 \times 127 / 230 \mathrm{~V}$ |

| Class A: | $\mathrm{I}_{\text {st }} \leq 0.005 \times \mathrm{I}_{\text {ref }}$ |
| Class B: | $\mathrm{I}_{\text {st }} \leq 0.004 \times \mathrm{I}_{\text {ref }}$ |

## General

## Operating Behaviour

Voltage failure (Power Down)
Voltage (for $\mathrm{U}_{\mathrm{n}}=230 / 400 \mathrm{~V}$ ) 170 V , configurable

| Voltage restoration (Power Up) | $<5 \mathrm{~s}$ |
| :--- | ---: |
| Function standby 3 phases | $<3 \mathrm{~s}$ |
| Detection of energy direction / phase voltage |  |
| Voltage | $>176 \mathrm{~V}$ |

## Power Consumption

| Power consumption in voltage circuit | per phase |
| :--- | ---: |
| Active power at $U_{n}$ (typical) | 0.45 W |
| Apparent power at $U_{n}$ (typical) | 0.51 VA |

Power consumption in current circuit
Apparent power at 5 A (typical)

## Environmental Influences

| Temperature range |  |
